

1 **ABSTRACT OF THE DISCLOSURE**

2 A ball chair with a retaining device has a seat (10), a spherical
3 cushion (20) and two retaining pieces. The spherical cushion (20) rests on
4 the seat (10). The two retaining pieces are selective retaining rods or
5 retaining walls and are respectively attached to a rear end and a front end of
6 the seat (10). Thus, the spherical cushion (20) is held between the two
7 retaining pieces and firmly secured on the seat (10) to keep the spherical
8 cushion (20) from falling off the ball chair.
